CAB STAND

An App which makes your life easier

uRide

What is My project?

My Project is CAB STAND. It is basically an App which brings all the cab services at one platform. It will help the user to easily check the availability of their required cab and if by chance the cab is not available they can also go through the other services and their availability.

Why I chose this project?

I chose to develop this application because now a days the usage of these cabs have increased. people prefer to use these services due to which there might be possible that at sometime at someplace the required cab can not come so to save the time because closing the app opening the other service app and check whether they are available or not consumes the precious time of user.

This App brings all these services at one platform where user can easily access all the apps and can easily use it.

The only thing is that user have to create the account to use the specific service.
